CP255 - W2-S1: Map Projections

1- Projections Gallery

Goal: See how projections distort the world (and why CRS choice matters).

Open Map Projections gallery:

- Pick **two** projections that look very different.
- Use the tool to compare them, toggle between the views.
- For each projection, write **short answers:**
    - What is preserved? (shape / area / distance / direction)
    - What looks distorted most?
    - Where can that projection be useful?
- Upload a screenshot of your comparison page.

2- True Size Reality Check

Goal: Understand why Web maps can mislead about an area.

Open Truesize:

- Drag **Greenland** over **Africa**, then over **South America**.
- Drag Greenland over the **U.S.**
- Answer (pair discussion), write down your answers:
    - What did you *think* was true from typical maps?
    - What is actually true?
    - Why does the distortion grow toward the poles?
